

AGRA-ROUSE®

BLENDED PHYTOHORMONE SOLUTION

Agra-Rouse™ is a specialized blend of bio-stimulants containing both naturally occurring and synthetic plant growth regulators and hormones. Designed for use on crops, it works in harmony with the plant's natural processes to stimulate root growth, promote cell division, and support vigorous development. Agra-Rouse™ offers a targeted approach to crop management, enhancing overall plant health and performance across a variety of agricultural applications.

KEY BENEFITS

Cytokinin: Promotes cell division, shoot initiation, and bud formation. Enhances chlorophyll synthesis, leaf expansion, and nutrient mobilization.

Gibberellic Acid (GA₃): Stimulates stem and root growth, promotes seed germination, and regulates biosynthesis. Plays a critical role in elongation and development.

Indole-3-Butyric Acid (IBA): Supports rooting and propagation by stimulating root and stem development. Regulates apical dominance and enhances cell elongation.

WHY CHOOSE AGRA-ROUSE?

Agra-Rouse™ offers an effective solution for both turf and ornamentals, promoting root growth, nutrient uptake, and plant vigor. Its versatile application methods, including foliar sprays, seed treatments, and transplant solutions, make it adaptable to a wide range of planting and maintenance practices.

Active Ingredients

Indole-3-Butyric Acid (IBA)..... 0.09%
Cytokinin, as Kinetin..... 0.05%
Gibberellic Acid (GA₃)..... 0.05%

Applications

Field Crops, Fruits, Tree Nuts, Vegetables, Herbs & Spices:

4 - 8 oz. per acre

Seed Treatment:

1 - 4 oz. per 100 pounds of seed

Transplant and Rooting Solutions:

1 - 2 oz. per 5 gal. of solution
