

INCITE®

BLENDED PHYTOHORMONE SOLUTION

Incite® is a specialized blend of bio-stimulants featuring naturally-occurring and synthetic plant growth regulators and hormones. Specifically designed for use on turf and ornamentals, Incite™ works in harmony with the plant's natural processes to promote top growth, enhance leaf expansion, and improve overall plant health. It provides a targeted approach to plant management, focusing on foliage development and canopy health for a wide range of applications.

Active Ingredients

Indole-3-Butyric Acid (IBA).....	0.05%
Cytokinin, as Kinetin.....	0.05%
Gibberellic Acid (GA ₃).....	0.09%

Applications

Foliar and Soil Applications:

Ornamentals, Trees, and Turf:
Apply 4 - 8 ounces per acre.

Seed Treatment:

Apply 1 - 4 ounces per 100 lbs. of seeds.

Transplant and Rooting Solutions:

Nursery/Container Use 1 - 2 ounces
per 5 gallons of solution.

See product label for specific
application instructions and timing.

KEY BENEFITS

Cytokinin: Promotes cell division, shoot initiation, and bud formation. Enhances chlorophyll synthesis, leading to improved leaf expansion and greener, healthier plants.

Gibberellic Acid (GA₃): Stimulates stem elongation, leaf growth, and canopy development. Supports rapid recovery from environmental stress.

Indole-3-Butyric Acid (IBA): Encourages balanced top growth and shoot formation while supporting overall plant vigor, chlorophyll synthesis, leaf expansion, and nutrient mobilization.

WHY CHOOSE INCITE?

Incite™ is designed to enhance top growth by promoting foliage health and density. It supports faster recovery from both winter and summer damage, improves leaf growth in turf and ornamental plants, and accelerates growth in newly seeded areas for quicker establishment. With versatile application methods, including foliar sprays, transplant solutions, and seed treatments, Incite™ provides a flexible solution for maintaining strong, healthy plants.
