

PRUDENT® AG

UREA PHOSPHITE FERTILIZER

Prudent® AG is a high-performance urea phosphite fertilizer that enhances nutrient uptake, plant vigor, and stress resilience across a wide range of crops. It delivers a readily available phosphorus source, promoting strong root development, improved nutrient efficiency, and natural plant defenses.

Unlike traditional potassium phosphite, which can struggle with uptake due to its positive charge, **Prudent AG's charge-neutral urea phosphite** ensures superior nutrient absorption. This means faster, more effective phosphorus delivery where plants need it most.

Compatible with most fertilizers and crop protection products, Prudent AG integrates seamlessly into fertility programs. It can be applied via foliar sprays, fertigation, or soil applications—helping growers achieve healthier, more productive crops.

THE PRUDENT AG DIFFERENCE

- **Enhanced Phosphite Technology**
Formulated for efficient phosphorus availability and rapid plant response
- **Supports Disease Defense**
Aids in strengthening plant cell walls and supporting natural defense mechanisms
- **Maximizes Nutrient Uptake**
Improves phosphorus mobility for better root and foliar absorption
- **Compatible and Easy to Mix**
Works well with most fertilizers, fungicides, and crop protection programs
- **Reduces Environmental Stress**
Helps crops withstand challenging conditions, improving resilience and performance
- **Minimizes Scale Build-Up**
Keeps unchelated metals stable in solution, reducing spray tank residue

Guaranteed Analysis

Total Nitrogen (N).....6.0%

1.0% Ammoniacal Nitrogen

5.0% Urea Nitrogen

Derived from aqua ammonia and urea phosphite

Applications

Apply 1 to 4 pints per acre per application.

Foliar Applications:

Can be applied with all types of ground spraying equipment or by air.

Check label for specific rates and timing of applications.
